THE NEXTLOT SYSTEM

Dear Valued Customer

The NextLot system is very straightforward, and provides ease of use while registering, and bidding. To register please go to <https://bclivestock.nextlot.com/public>

Click on the red “SIGNUP” button and fill in the fields. After you have registered you can then view the auctions and BID. Please do not hesitate to contact Elysia Penner (250 570 1415) if you are not comfortable registering and bidding, or if you do not have the technology to do so. We are happy to help at any time.

If you choose to have a BC Livestock team member bid for you, please be assured that your bid is held in confidence and we will always be fair and honest, placing the bid as if you were bidding yourself.

Thank you,
BC Livestock & NextLot Team

TIMED AUCTION HORSE RACE CLOSING – EXTENDED BIDDING

Benefits

- No order of sale to wait through – all lots are offered and bid on simultaneously
- Buyer has the choice to switch to any lot in the offering – if you are outbid on a particular lot
- Buyers have choices and more time to make decisions
- Maximum bidding is a feature you may use. Allows you to place a private maximum bid that only you will know and allow the computer to bid on your behalf when another bidder places a bid on the same lot you are seeking.
- Can be set to notify you by text message or email if you have been outbid. Please check with Elysia Penner (250 570 1415) on the different features. Not necessary to stay by your computer for the duration of the sale.
- Bidding can be completed on your behalf by any of the BCLC sale contacts. When bid is given to contacts it is confidential, they are working for you.
- Extended bidding – the auction is not declared closed at 7: 00 pm unless there has been 5 minutes of inactivity on the whole sale. If there is any bidding during the inactivity period, the auction is extended until there is no bidding for 5 minutes on any lot. At that time all lots are declared closed and the entire sale ends.

RED MOON ANGUS HERD HEALTH

Red Moon Angus employs a complete herd health program focusing on preventative care of the herd. The breeding herd is vaccinated with Express 5, Fusogard and blackleg boosters prior to breeding. The calves are vaccinated in the spring and fall with Pyramid 5 Presponse and black leg vaccine. The bull calves are given Fusogard in the late fall and early winter for footrot prevention. I would like to wish the Moons the best of luck on their bull sale.

Dr. Kim Beaudette, DVM

INSURE YOUR BULLS

Canadian Farm Insurance – Representative 780 305 1146 – can insure up to a year, covers breeding season and wintering – options to choose from

Hartford Insurance – through the BCLC Vanderhoof Office 250 567 4333 – up to 90 Day insurance or discuss with Elysia Penner 250 570 1415

FEED AND DELIVERY

Bulls can be fed at Red Moon Angus until May 1st, if insured. Free Delivery to Williams Lake and Kamloops BC Livestock yards on Bulls over sold over \$4000, delivery is at Red Moon Angus convenience. Other deliveries can be arranged, just talk with us.

ANGUS GS AND GENOMIC TESTING

All bulls in catalog have been DNA tested under the Angus GS program. Sires are verified. Genomic testing is one more tool for breeders to use to more accurately predict the future performance of animals as parents in the population, but this is not a replacement to performance data recording. Genomic test results in addition to pedigree, performance and progeny data for increased reliability of an animal's EPD. Visual on the animal is still very important when choosing your herd bulls.

PRE SALE VIEWING

We will have the bulls penned on Saturday March 25th from 10 am to 5 pm for you to walk through at your leisure here at the home place. 10114 Snell Rd West, Vanderhoof, BC. You are also welcome to visit the farm from now to sale day.

Welcome

Welcome to our 4th on line timed auction for Red Moon Angus. Thank you to all that bid and purchased from us over the years. The way we sell the bulls may have changed but not the quality of the bulls. We are happy to team up with the BC Livestock Producers Cooperative NextLot system. Please feel free to contact us or Elysia Penner (250 570 1415) with any questions you may have on the system.

On offer are 18 Red Angus yearling bulls. Contacts from BCLC have walked the pen and will be familiar with the quality of the bulls. Please feel free to contact them.

Our bulls reflect the fundamentals we breed for, calving ease, structure, maternal traits, muscle and performance. They will be 15 to 17 months by the time they head to your breeding pasture. The Dam's side of things plays a very important role in her offspring, as such we include as much info on her in our write-ups as we can.

More information is available as we get closer to sale date, such as current weights. We record every bull's destination and can easily tell you if you have used a particular genetic line.

We continue to use Top AI sires in our lineup and purchase good walking bulls. Always keeping in mind the needs of our customers. All bulls in catalog have been DNA tested under the Angus GS program. Sires are verified.

Genomic testing is one more tool for breeders to use to more accurately predict the future performance of animals as parents in the population, but this is not a replacement to performance data recording. Genomic test results should be used in addition to pedigree, performance and progeny data for increased reliability of an animal's EPD. Visual on the animal is still very important when choosing your herd bulls.

We will have the bulls penned on Saturday March 23rd from 10 am to 5 pm for you to walk through at your leisure here at the home place. 10114 Snell Rd West, Vanderhoof, BC. You are also welcome to visit the farm from now to sale day.

All the bulls are fed a home, we feed a balanced ration and our own grown dry mixed forage. Bulls are fed to promote healthy growth and development. The pen is on a complete vaccination program; including express 5 and protection for foot-rot, by sale day, all will have had their booster shots and ivermectin. We weigh throughout winter, weather permitting, weights may be viewed on our web site www.redmoonangus.com. The pen is fed by hand and bulls are familiar with people walking amongst them. All bulls will be vet checked and semen tested. They will be ready to work for you!

Searching through our past bull buyers list we find it extremely satisfying to find the amount of repeat customers of our bulls, we can't thank you enough for your continuing support.

A power bull recommended for cows. Higher BW here with very good performance, 1165 lb weight on Jan 16. Mother is a performance cow. Bull calves from her have averaged 97 lbs and heifers 76 lbs. Top 20% in weaning weight and top 15% for yearling weight. Correct and good footed.

Red Moon uses *ANGUS GS* testing

Genomics are:

- Used to parent verify animals for guaranteed pedigrees
- Used to calculate more accurate EPDs, especially for younger animals

Genomic technology has been used to make EPDs more accurate. The genomic data increases the accuracy with which we relate animals to each other, verifying pedigree information, and allowing us to apply phenotypes of related animals to non-phenotyped animals. Genotyping animals has led to more accurate EPDs for younger animals. This means that doing the Angus GS test on an animal gives you as much information as having 23 calves with birth weights recorded and as many as 12 calves tested for individual feed intake. It's specifically designed for Angus genetics. There is a lot of value on genomic technology, specifically the Angus GS test.

EPDs: are a universal way of describing the genetic potential of progeny from breeding stock, a genetic selection tool that can help producers reach a breeding selection goal for their herd.

EPDs: can help you maintain the traits that you want to keep in your herd

EPDs: are the only fair way to compare breeding stock across herds and different environments

Angus GS includes:

- SNP Parentage Verification
- Genetic condition test results
- Genomic percentile ranks
- GEPDs (more accurate genomically enhanced epds)
